PERFORMANCE SIMULATION & TRAINING

BE READY

During this time of uncertainty, we are focused on helping in any way we can, while still ensuring our employees and clients are safe. We are a technology-based company so we're working with our skills, software and hardware to do what we can to help our clients and community during these unprecedented times.

Firstly, we've gone to our clients to offer the ability to use the eLearning portion of our Advanced Coxswain Training in a remote capacity.

Secondly, we've started a Folding @ Home initiative (it's safe, effective and everyone can take part). Using every extra bit of computing power we have to assist in looking for a cure for Covid19. We have it running on all our simulator computers, so they've all been repurposed during the down time in training. Check them out at foldingathome.org.

Thirdly, we have two 3D printers that we normally use for building simulator components. We have contacted Eastern Health to let them know that if they need our systems to print devices or any other items, we are ready to help.

We have a very close-knit team as well, so being separated and isolated from each other is tough. To ensure we're bringing some fun and socializing into the mix we've started an online music challenge within our group. It's definitely helping us stay connected.
