Local Private Laboratory Produces Hand Sanitizer

Avalon Laboratories Inc. has started to locally produce hand sanitizer for their customers.

"As the only privately-owned certified laboratory in the province we were approached by many of our clients facing the decreasing supply of product available. Given our in-house expertise we were quickly able to formulate a solution and contribute in a positive way during this pandemic," says Paul Antle, president of Avalon Laboratories.

The product, conforming to World Health Organization guidelines, will be available in the market before the end of April. It is packaged in either a 4-liter or 500 ml dispensing container.

"The entire product is being made right here at home from the chemistry to the packaging and labelling. It's all local. Our entire team contributed in making this happen and we are proud of them," says Craig Ralph, general manager at Avalon Laboratories.

Avalon Laboratories staff have been working for over 20+ years providing analytical testing services in toxicology, microbiology, water and petroleum for all industries, including health care, mining, fishery and oil & gas. Producing hand sanitizer is a first for them.

To learn more or access info on the availability of their hand sanitizer, please contact Craig Ralph at 749-7776 or cralph@avalonlaboratories.com.
