

ClearRisk™ is a leading risk management company in North America, headquartered in St. John's, and supports the risk management needs of over 150 organizations. In response to the Covid-19 health crisis, ClearRisk™ has developed its Pandemic Risk Management Module to support risk management processes for public and private organizations. In line with our company's corporate social responsibility values, this module is offered free of charge during this challenging time.

The Pandemic Risk Management Module is a web-based tool that is easily incorporated into an organization's existing human resource management and/or risk management processes. If your current processes are not yet online, this tool can be adopted very quickly. The module provides focused, usable information to manage the impact of Covid-19 in your organization, to help you better align human resource needs and reduce exposure within your organizations.

ClearRisk™ will work with organizations to upload the Pandemic Risk Management Module software, provide training and customer support. This can be completed in a very timely manner to offset the potential significant impact of the pandemic and reflect an organization's existing guidelines around employee privacy.

The ClearRisk™ Pandemic Risk Management Module offers the following data collection capacity to best manage and align human resource needs:

- compiling pandemic details with overall data trends for:
 - total exposure numbers in the organization
 - confirmed employee cases
 - employees affected along with pandemic status
 - tracks individual cases including, but not limited to, exposure date, specific symptoms
 - track cases on an interactive map
 - get data insights to address developing problem areas
 - better prepare for and manage future crises with data insights
