

NDP Response

Energy NL

We believe in a strong energy future for Canadians, and supported Bill C-51, ensuring Atlantic Canada can harness renewable offshore energy, and be a powerhouse in the clean economy.

Newfoundland and Labrador has identified critical minerals, wind and hydrogen, electrification and CCUS as key priority areas.

New Democrats look forward to working with Newfoundlander and Labradorians to move forward on these priorities, ensuring they create good jobs for Newfoundlanders and Labradorians with good salaries and an essential role in our energy future. We will work on an East-West clean energy grid—a major country-building infrastructure project. We know that this project will deliver affordable, clean and secure energy to people and businesses in every region of the country. And we'll build it with Canadian building materials like good, Canadian steel, creating well-paying unionized jobs across the country.

We will bring together all levels of government, businesses and unions to develop a national strategy aimed at boosting the mining and processing of Canada's natural resources. Electing New Democrat MPs from Newfoundland and Labrador will ensure no one party can ignore good jobs in Newfoundland and Labrador's energy sector.

Sincerely,

The NDP Team
